

BANXX

Feature Overview

v1.7.0 · Android · UAT build · 35 screens captured 27 August 2026

Every feature in the BANXX v1.7.0 build, in the order the app itself presents them — onboarding first, then the five tabs of the bottom bar. Each section lists what the screen does and shows the screens captured from the running build.

CONTENTS

01	Onboarding & sign-in	6 screens
02	Dashboard	7 screens
03	Widget customisation	2 screens
04	Charles — the AI assistant	2 screens
05	Offers, Apply & Applications	4 screens
06	Notifications	2 screens
07	Support — Help & Chat	7 screens
08	Settings & profile	3 screens
09	Recent activity	1 screen
10	More	1 screen

01 Onboarding & sign-in

A three-slide introduction, then a phone-number sign-in with OTP. New users are asked for their name, email and date of birth once; returning users go straight to the dashboard.

- Three-slide intro carousel, skippable at any point
- Sign-in by 10-digit mobile number — no password
- Six-digit OTP with a resend timer and a masked destination number
- One-time profile capture: first name, last name, email, date of birth
- Terms and privacy consent recorded at sign-in

33. Onboarding 1 of 3 — the future of financial services

34. Onboarding 2 of 3 — AI powered financial insights

35. Onboarding 3 of 3 — bank-grade security & privacy

TAB 1

02 Dashboard

The home screen opens on Charles, who counts the opportunities matched to the customer, and then a stack of widgets — one per product family, each a carousel of live lender offers.

- Charles opportunity card — a written summary of every matched offer, counted by product
- Personal Loan Offers carousel: amount, term, interest rate and fees per lender
- Gold, Housing and Insurance offer carousels, each paged independently
- Card Offers with a secured / unsecured filter and annual fee per card
- Deals — redeemable brand vouchers, paged one at a time
- AI Chat, Voice Commands and AI Advice as their own widgets
- Light and dark theme, switched from the header
- Unread notification count on the header bell

4. Dashboard on first open, with the sign-in confirmation

1. Dashboard — Charles opportunity card above the personal loan, insurance and gold loan carousels

2. Dashboard — housing loan offers, redeemable deals, and card offers with a secured/unsecured filter

5. Dashboard — the offer widgets further down the scroll

3. Dashboard — the AI Chat, Voice Commands and AI Advice widgets

6. AI Advice fetching personalised guidance

7. AI Advice loaded, with Read more for the full recommendation

03 Widget customisation

The dashboard is not fixed. Customize Widgets turns every card into something the customer can resize, reorder or remove, and the catalogue offers back anything they have taken off.

- Per-widget resize and remove controls, with Save and Close
- Add New Widgets catalogue listing every available widget and its offer count
- Medium or Large size per widget
- Drag to reorder; the layout is remembered per account
- A built-in “How does this work?” walkthrough

10. Customize Widgets — resize and remove controls on every widget

11. Add New Widgets — size choice and the widget catalogue

04 Charles — the AI assistant

Charles answers questions about the customer's own finances. It opens with prepared questions so the first message is one tap, and takes dictation as well as typing.

- Prepared opening questions, served by the API
- Free-text and voice-dictated questions
- Markdown-rendered replies, with a stop control while one is being written
- Voice Commands widget — ask Charles by speaking, with spoken replies
- AI Advice — a written, personalised recommendation with a saving figure

8. Charles AI Chat — prepared questions to open a conversation

9. Charles AI Chat — a question sent; this run answered "Conversation not initialized"

05 Offers, Apply & Applications

One tab, three jobs: the offers already matched, the products still to apply for, and the state of everything submitted.

- Offers — matched lender offers grouped by product, with the count per group
- Apply — pick a product; anything already submitted is marked Applied
- Applications — every application with a stage filter (All / Application Started / Journey not started)
- Application detail: requested amount, offer amount, tenure, interest rate, processing fees, reference ID
- A two-step progress track — Applied, then With lender
- Continue with lender, which hands off into the lender's own journey
- Key Fact Statement (KFS) viewer for offers that carry one

12. Offers — matched lender offers grouped by product

13. Apply — pick a product; submitted ones are marked Applied

14. Applications — all eleven, with stage filters

15. Application detail — amounts, rate, fees, reference ID, progress and lender hand-off

06 Notifications

A dated inbox behind the header bell — payments received, bills falling due, card spend alerts, EMI reminders and statements.

- Paged inbox, newest first, with an unread dot per row
- Unread count on the bell, kept in step across every tab
- Full detail view; opening a notification marks it read
- Categories drive the row avatar — payments, bills, cards, loans, statements
- An acknowledge action and a Contact Us route out of the detail view

21. Notifications — payments, bills, card alerts, EMI reminders and statements

22. Notification detail — the full EMI reminder

07 Support — Help & Chat

Two ways to get unstuck: a searchable article library organised by product, and a chat with Charles that escalates to the support team when it cannot resolve something.

- Searchable help centre across eight product categories
- Article list per category, with the full answer in place
- Was this article helpful? — a yes/no vote, confirmed on submit
- Start Chat from any article, carrying the context
- Chat history drawer with every past conversation and a Start New Chat action
- Suggested questions on an empty chat

23. Support — Get Help, with search and AI instant answers

24. Support — help article categories

27. Support — the article list for a category

28. Support — an article, with a helpful vote

29. Support — feedback recorded and confirmed

25. Support — Charles chat with suggested questions

26. Support — chat history drawer and Start New Chat

08 Settings & profile

The customer's own record, and the switches that decide what the app is allowed to send them.

- Edit profile — first name, last name, email, date of birth
- Last login shown on the profile card
- Mobile number displayed read-only, tied to OTP and security alerts
- Notification preferences per category
- Critical security alerts are always delivered and cannot be switched off
- Log out from this device
- Delete account — permanent, behind a confirmation

16. Settings — My Profile, with last login

17. Settings — contact details, log out and delete account

18. Settings — notification preferences; critical alerts stay on

09 Recent activity

A short audit trail of the account, so a customer can see what was done and when — useful when a session was not theirs.

- Last activity, with time and day
- The last five actions taken in the app
- Sign-in events recorded alongside screen visits

19. Recent Activities — last activity and the last five actions

10 More

A roll-up of everything on offer, counted by product, for a customer who wants the total rather than the per-widget view.

- Loan offers recommended, counted per product — personal, gold, housing, insurance, cards
- A running total across every product
- Direct route into the full personalised offer list

20. More — offer counts per product and the total

ALSO IN THIS BUILD

No screens supplied

Promotional banners

Four dashboard placements — popup, top card, offers carousel and a strip above the bottom bar — published from the admin panel and routed by artwork size. None were live when these screens were captured.

Loan status tracker

A per-product application tracker built from the credit record, with the lender hand-off that produces the application number.

KFS document viewer

In-app viewer for a lender's Key Fact Statement PDF.

Voucher redemption

Redeem Now on a deal opens the voucher provider's journey.

Offline screen

A dedicated no-connectivity screen; the dashboard refetches once the connection returns.

Splash & theme

Branded launch screen, and a dark/light theme toggle that persists per account.
